**D & K Plating Co.
OKD007208747**

October 25, 1988

Location: This site is located at 4600 N.W. 7th Street in Oklahoma City, Oklahoma. It is in Oklahoma County. The site is in the NE ¼, NE ¼, S 34, T12N, R4W.

Description: D & K Plating Company has operated at this site for several years. They specialize in nickel, chrome, and copper metal plating. They are a small quantity generator of hazardous waste. They have a permit from Oklahoma City to discharge some of their liquid waste into the sanitary sewer.

The building is situated in the southeast corner of a commercial storage yard. The total site is less than 0.5 acres in size. It is fenced along with the storage yard. Joe Esco Tire Co. bounds the site on the south and east sides and an oil field equipment yard is located on the west side. The storage area forms the northern border of the site.

There were some areas of stained soils and stressed vegetation noted on the site inspection. A waste pile of a metallic material was on the ground outside the building. There was one drum which contained a metal sludge which was being stored for disposal as hazardous waste.

Three soil samples and one sample of the metallic waste pile were collected. All of the samples except for the background soil sample exceeded the limit for cadmium E.P. toxicity.

Recommendations: At this time the Oklahoma State Department of Health (OSDH) is pursuing private remedial action by the site operator. This is being handled as a corrective action by the Industrial Waste Division (RCRA Program). There is no reason for further action under the Superfund Program unless OSDH is unsuccessful in obtaining the cooperation of the site operator under RCRA.
